PROFESSIONAL SUMMARY

Senior Test Automation Engineer / SDET with 5+ years of experience designing and maintaining scalable UI and API test automation frameworks using Java, REST Assured, TestNG, Playwright, Selenium, Python, and TypeScript. Hands-on in regression, functional, System Integration (SIT), and end-to-end (E2E) testing of multi-service platforms, with automated suites integrated into GitHub Actions, Jenkins, and Azure DevOps CI/CD pipelines with scheduled runs and Allure reporting. Experienced in SQL-based backend validation, defect triage, mentoring engineering teams, and driving shift-left testing in Agile/Scrum environments, using AI tools (Claude Code, Cursor AI, OpenAI API) to accelerate test development.

TECHNICAL SKILLS

Languages & DB	Java, Python, JavaScript/TypeScript, SQL (SQL Server, MySQL, Oracle)
UI Automation	Playwright, Selenium WebDriver, Page Object Model (POM), Cucumber (BDD)
API Automation	REST Assured, Postman, Newman, JSON Schema Validation, GraphQL
Frameworks & Build	TestNG, Pytest, Maven, Allure Reports
CI/CD & DevOps	GitHub Actions, Jenkins, Azure DevOps, Docker, Git (branching, pull requests, code reviews)
Testing	Regression, Functional, SIT, E2E, Smoke, API, Cross-browser, Performance, Load, Shift-Left Testing, Agile/Scrum
AI Tools	Claude Code, Cursor AI, OpenAI API, Prompt Engineering

WORK EXPERIENCE

Test Automation Engineer

Dubizzle Labs, Karachi *Dec 2025 - Present*

- Developed and maintained 700+ Playwright end-to-end automation tests across six business verticals using AI-assisted workflows (Claude Code, Cursor AI), increasing automation coverage from 50% to 65% while improving regression reliability.
- Manage a regression suite of 5,000+ test cases, leading defect triage and root-cause analysis of failures using test execution logs and reports, and partnering with developers to fix flaky tests and improve automation stability.
- Contributed to a Java-based REST Assured and TestNG API automation project, developing 50+ API test cases with request/response and JSON schema validation, executed in smoke and regression suites via GitHub Actions CI/CD.
- Engineered a centralized, thread-safe test configuration layer resolving settings from JVM properties, environment variables, and properties files, standardizing local and CI/CD execution across GitHub Actions and Jenkins.
- Led Shift-Left testing initiatives by mentoring 15+ developers and QA engineers on Playwright automation, test design, and automation best practices, enabling engineering teams to own automated testing.
- Built a QA Health Dashboard in the AI Testing Hub giving Engineering Managers real-time visibility into regression health and release readiness across six verticals, with 30-day pass-rate trends, vertical health scores, and coverage metrics.

Test Automation Engineer

Fantastic Health, Remote *Oct 2024 - July 2025*

- Built a Selenium WebDriver automation framework from scratch in Python and Pytest using a modular Page Object Model (POM) with reusable components, improving automation coverage by 40% and cutting manual testing effort by 50%.
- Executed functional, UI, regression, cross-browser, and responsive testing across desktop and mobile platforms, collaborating with developers and designers to identify, prioritize, and resolve defects.

Senior QA & Testing Engineer

Astera Software, Karachi *June 2021 - Feb 2024*

- Led end-to-end QA for customized trigger-based Change Data Capture (CDC) across SQL Server, MySQL, and Oracle providers, achieving 99% change data tracking accuracy.
- Designed and executed functional, regression, and System Integration Testing (SIT) across SQL, NoSQL, Big Data, file system, and cloud storage connectors, including SQL-based backend data validation and test data preparation, ensuring 100% requirements validation.
- Automated QA operations using Python and Azure DevOps, including automation of 6,000+ work items and 1,000+ workflows/dataflows, significantly reducing manual effort.
- Collaborated on Azure DevOps build pipeline optimizations, reducing Windows build execution time from 45 to 15 minutes.
- Performed root-cause analysis of 100+ customer-reported production issues through debugging and SQL analysis, and mentored new QA engineers while partnering with Product, Development, and UI/UX teams.

EDUCATION

Institute of Business Administration

Karachi, Pakistan

BS Computer Science *Aug 2017 - June 2021*
